## TORQUE MOTOR DESIGN FOR A GEAR HOBBER

Stanley Howard Euro are always looking for new developments and technological advancements that will benefit the customer.

The Company has just delivered a re-engineered **Koepfer 153 Gear Hobber** to a customer in the South of England.

This manual machine was converted to a full 4 axis CNC machine and was supplied with a newly developed torque motor design to replace the main spindle index gear drive with integral clamping system.

The benefits being a direct motor drive providing accuracy, the elimination of angular backlash and providing higher speeds.
